

Dear Radburg Manager's,

I am writing to express my interest in the Backend Developer position at Radburg. With a strong foundation in backend development, fueled by my experience at 3Pillar Global and a solid academic background in Electrical Engineering, I am eager to bring my skills and passion for creating efficient and innovative solutions to your team.

At 3Pillar Global, I honed my expertise in designing and maintaining RESTful APIs, optimizing application performance, and collaborating with cross-functional teams to deliver high-quality results. I have a proven track record of improving API response times and ensuring seamless integration between backend services and other application components. These experiences have not only sharpened my technical abilities in Java, SQL, and Git but have also deepened my understanding of teamwork in a dynamic environment.

My academic journey at the Technical University of Cluj-Napoca has further strengthened my problem-solving and critical thinking skills, particularly through projects such as developing algorithms for photovoltaic systems and working with complex electrical systems. Beyond academics, my participation in hackathons and hands-on roles in competitions has reinforced my ability to think creatively and work effectively under pressure.

What excites me most about Radburg is [mention something specific about the company or its projects that aligns with your goals, e.g., "its commitment to sustainability and innovation in technology"]. I am eager to contribute my skills to drive impactful solutions and grow alongside a team that values collaboration and continuous learning.

I would welcome the opportunity to discuss how my skills and experiences align with Radburg's goals. Thank you for considering my application, and I look forward to the possibility of contributing to your team.

Warm regards,

Ioan Filip
